Weld-Environment Sensor Cables for Weld Cell Applications

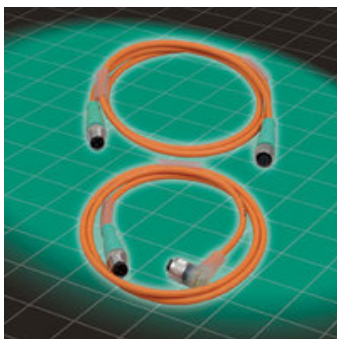

Extremely robust and flame retardant sensor cables designed to survive in harsh automotive manufacturing environments

POC Sensor Cables with
Industrial Sensors

Weld-slag resistant **POC sensor cables** are extremely robust and flame retardant, providing long life and **reliable operation** in high- temperature **welding applications**. The temperature-resistant cable jacket can withstand up to 150 degrees C and the flexible structure withstands high levels of mechanical stress, making **POC sensor cables** an ideal solution for use in **weld cell locations** in automotive industry applications.

Standard sensor cables can be damaged by weld slag

POC Sensor Cables

“**Weld slag** and the effects of molten metal flash from welding operations can quickly damage **standard sensor cables** leading to shorter service life and reduced productivity. Our new **weld-slag resistant sensor cables** use a cable jacket material that enables them to deflect the punishment handed out in harsh **welding applications**. As a result, users will benefit from a long, problem-free service life and reduced downtime,” says Dave Rubinski, Product Manager.

Pepperl+Fuchs is a leading developer and manufacturer of **electronic sensors** and **components** for the global automation market. Continuous innovation, enduring quality, and steady growth have been the foundation of our success for more than 70 years. Pepperl+Fuchs employs 6,300 people worldwide and has manufacturing facilities in Germany, USA, Singapore, Hungary, Indonesia and Vietnam, most of them ISO 9001 certified.
